SAR I V S C Z AC AZ	Status Register I: Interrupt flag V, S, C, Z: Compare flags AC, AZ: Arithmetic flags (SR refers to the compare flags subset) (AR refers to the arithmetic flags subset)
All general purpose registers are 16 bit long. ALU operations are 16 bit. 8 bit operations are not natively supported except for extended loads and truncated stores. The Status Register flags are split into two sets, the SR set and the AR set. Instructions may update SR only or both SR and AR.
