Registers

Register	Description							
RØ	16 bit, General Purpose							
R1	16 bit, General Purpose							
R2	16 bit, General Purpose							
R3	16 bit, General Purpose							
R4	16 bit, General Purpose							
R5	16 bit, General Purpose							
R6	16 bit, General Purpose							
SP	16 bit, Stack Pointer							
PC	16 bit, Program Counter							
Status I V S C Z AC AZ	Status Register I: Interrupt flag V, S, C, Z: Compare flags AC, AZ: Arithmetic flags (SR refers to the compare flags subset) (AR refers to the arithmetic flags subset)							

All registers are 16 bit. ALU operations are 16 bit. 8 bit operations are not natively supported except for extended loads and truncated stores. The Status Register is split into two sets, the SR set and the AR set. Instructions may update SR only or both SR and AR.

Condition Codes Summary

Encoding	Machine Name	Alt Names	SR Flags	Description
000	eq	z	Z	Equal than. Zero
001	ne	nz	!Z	Not equal. Not zero
010	uge	hs, c	С	Unsigned greater than or equal. Carry
011	ult	lo, nc	!C	Unsigned less than. Not carry
100	ge	-	S == V	Signed greater than or equal
101	lt	-	S != V	Signed less than
110	ugt	hi	C && !Z	Unsigned greater than
111	gt	-	(S == V) && !Z	Signed greater than
-	ule	ls	!C Z	Unsigned less than or equal Implemented as the opposite of ugt
-	le	-	(S != V) Z	Signed less than or equal Implemented as the opposite of gt
